

New from the British Society for the History of Science

An Element of Controversy

The Life of Chlorine in Science, Medicine, Technology and War

Edited by Hasok Chang and Catherine Jackson
from research by undergraduate students at University College London

This collection is the product of an innovative pedagogical experiment. Five successive cohorts of undergraduate students, each building on the work inherited from the previous year, produced an academic monograph. The outcome is an engaging history of the chemical element chlorine from its first isolation in the 1770s to the late 20th century. With a methodological focus on controversies, this rich collection includes studies on the history and philosophy of chemistry, the history and ethics of chemical warfare, the medical and technological developments of disinfection and bleaching, and the environmental impacts of organo-chlorine compounds from the Vietnam War to *Silent Spring*.

“A 21st-century exemplar for integrated teaching and research in history of science. Every historian of science should read it, as should their students.”

— Graeme Goody, *Division of History & Philosophy of Science, Univ. of Leeds*

“An engaging and instructive story, full of life and surprising insights.”

— Helge Kragh, *History of Science Department, University of Aarhus*

“Chang and Jackson transform students into a professional community of researchers. This is truly higher education.”

— Stephen Rowland, *Professor of Higher Education, University College London*
